C-Questor seeks to combat global warming and climate change on a commercial basis by using a wide range of integrated scientific approaches, to

Reduce carbon emissions
Capture carbon emissions

Replace carbon fuels with renewable energy
Sequester and store captured carbon emissions

Our mission is to 'Combat Global Warming' by reducing the amount of carbon dioxide and other greenhouse gases in the atmosphere. We are dedicated to becoming the world's leading provider of technologies that Reduce, Replace, Capture and Sequester carbon emissions. Multiple revenue streams from our products, by-products and services make our solutions to combat global warming highly attractive and ensure that C-Questor's projects are well received at local and national level.
